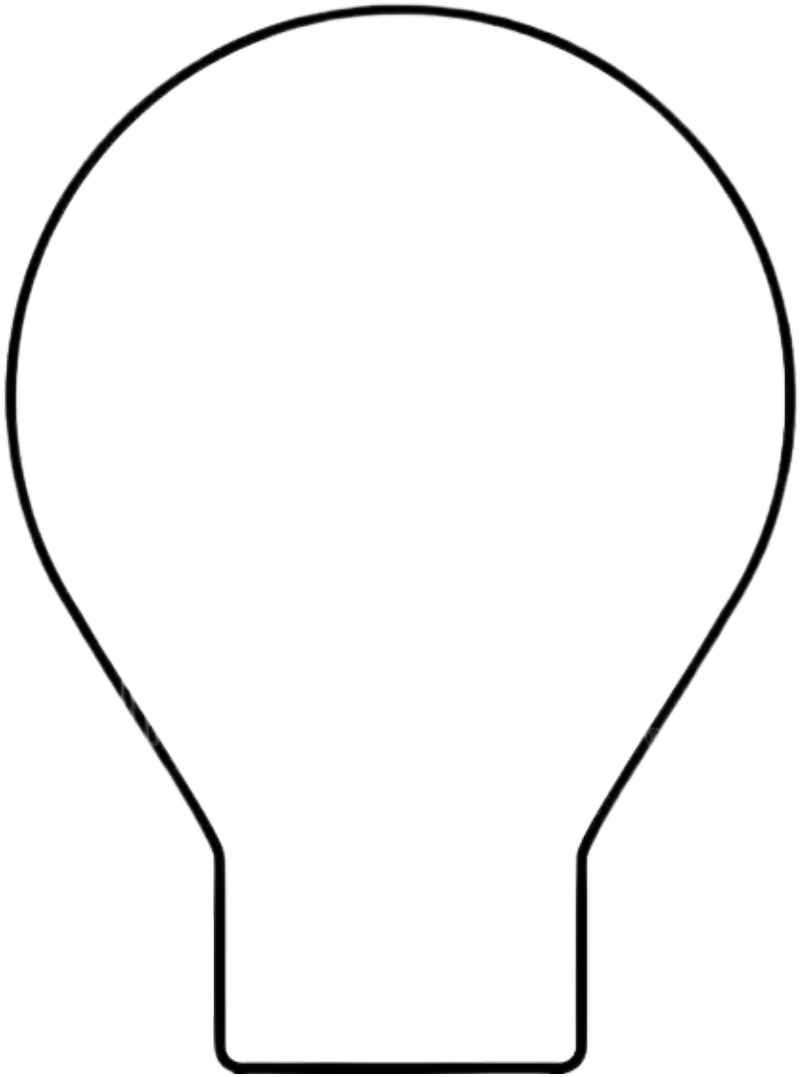
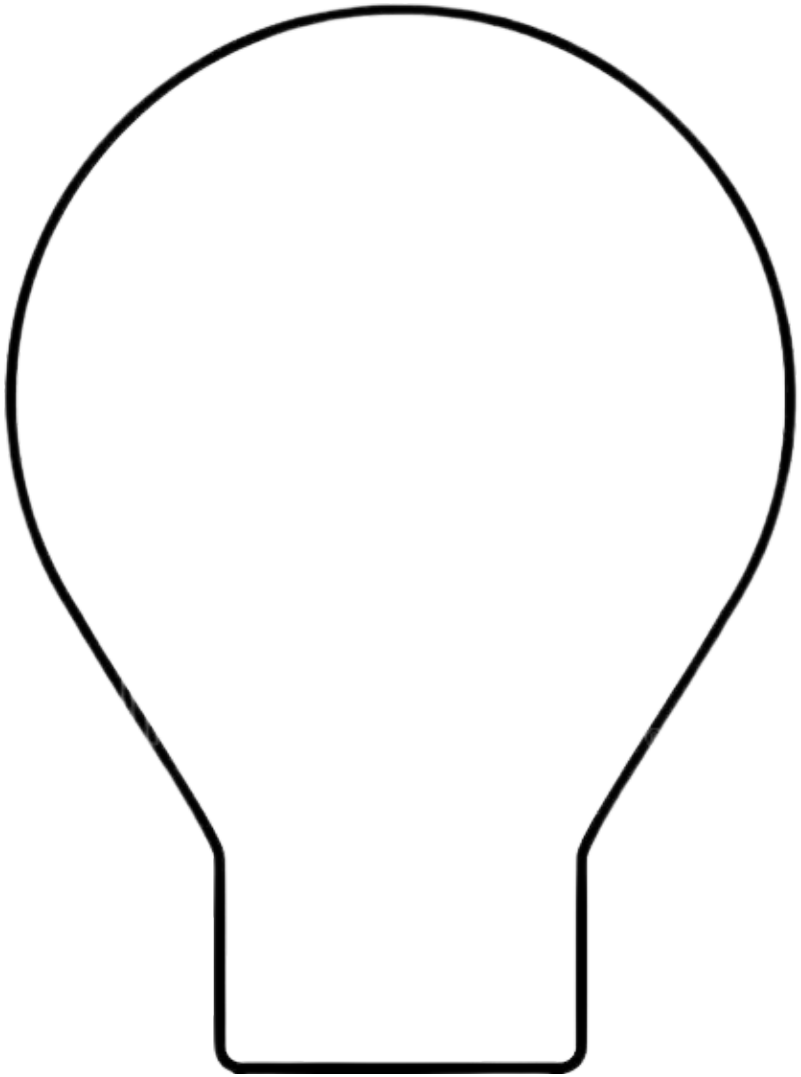
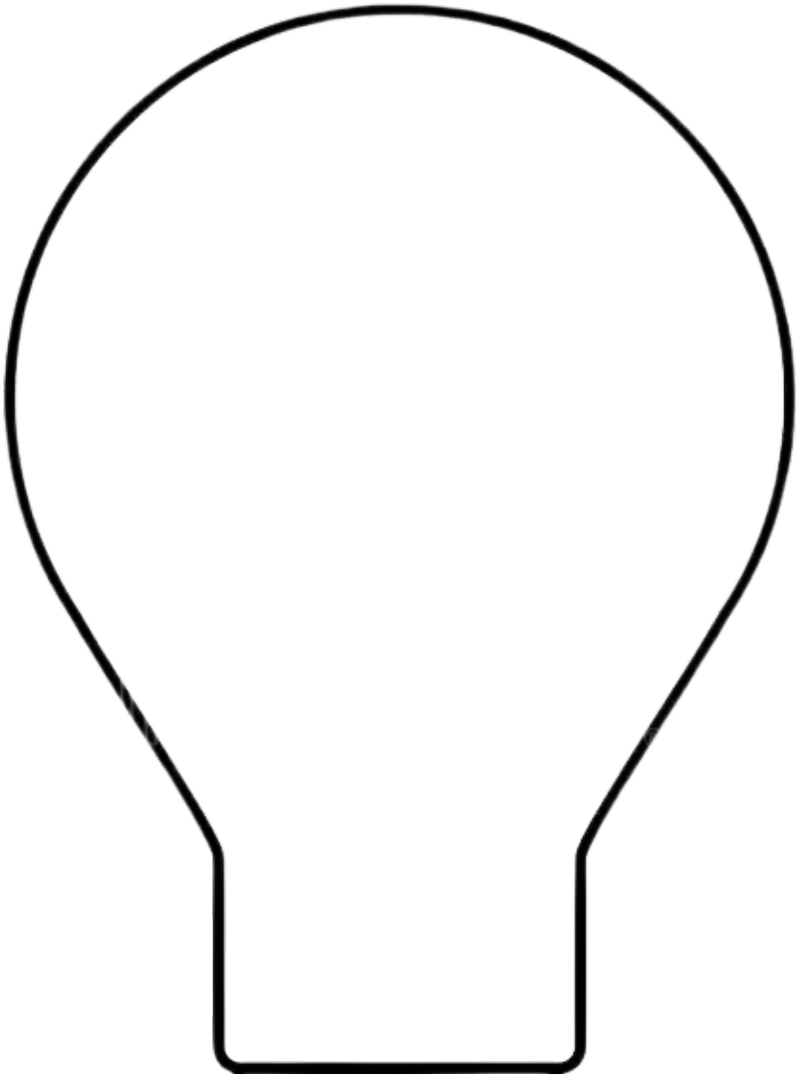
HOTAIR BALLOON

Instructions:

1. Cut out all 5 balloon shapes. Fold each balloon in half lengthwise.
2. Starting with the balloon on this page (it will be your middle balloon) put glue on the exposed outer halves. Glue one half of a balloon to one side of the middle balloon and glue another half of a balloon to the other side.
3. Continue adding balloon halves to each other to create a 3D fan. All balloons should connect edge-to-edge.
4. Open the balloon fan. Glue the two outermost balloons flat onto the blue cardstock. The middle balloons will pop out in 3D.
5. Cut a small square from honeycomb paper for the basket. Glue strings from the bottom of the balloon to the basket.
6. Add clouds to the sky.







★ This is your middle balloon. Fold in half lengthwise. Apply glue to BOTH outer halves (not the centre fold). See sample diagram for finished balloon.
